1. INTRODUCTION

This Specification for Document Requirements for Suppliers is intended for Suppliers who have a direct Purchase Order with Neptune Energy Netherlands B. V. (COMPANY) to provide goods or services and includes the delivery of documentation in the scope. This Specification outlines the minimal requirements for documentation and the delivery of documentation to ensure the document review and handover process can be handled smoothly from PO Placement to PO Close Out.

2. GENERAL DOCUMENTATION REQUIREMENTS

2.1 Language

All drawings and documents shall be written in the ENGLISH language.

2.2 Document Numbering

All deliverables shall have a COMPANY document number. The COMPANY document numbers will be assigned by the COMPANY document controller. These numbers will be assigned using the Supplier Document Requirement List (see 3.0).

2.3 Hardcopy Formats

Documents and drawings shall be readable when printed on A3 or A4 size paper. There is no requirement for hardcopy delivery unless specifically requested.

2.4 File Formats

The default file format to be used during the document review is PDF. For certain document types the native files will be required to be able to review i.e. the Supplier Document Requirement List (SDRL) and Instrument Index. Supplier will be informed if other native files are required during review.

The default file format to be used during handover of final documentation is PDF. If native files of the final documentation handover are required this will be indicated in section 9.0.

PDF files shall be flattened. This means there shall be no layers or drawing elements separate in the PDF files. Supplier shall strive to deliver the best quality of PDF files while keeping the file size limited. To achieve this PDF files are preferably created from natives (e.g. dwg, xls, doc) instead of being scanned whenever possible.

2.5 File Names

The files shall be named as follows:

COMPANY document number_revision.extension

i.e. L5-A_ST-S46-0001_00.pdf

2.6 Document Identification

All documents shall be delivered with a filled in Supplier Document Front Sheet.

As a minimum the following information shall be included on the documentation:

- Project Name
- Project Number
- COMPANY name
- COMPANY Purchase Order number
- COMPANY document number
- Equipment/Tag number
- Equipment Description
- Supplier Name
- Document Title
- Revision number
- Revision description

2.7 Revision Indication

Revised documents shall clearly indicate the changes made using revision clouds and revision triangles.

Revision numbers shall be sequential 2-digit numbers, i.e. 00, 01, 02, 03 etc. The first revision shall be 00.

2.8 Verification of Documentation

All deliverables shall be checked for correctness by Supplier prior to submittal to COMPANY. All deliverables shall show the Author, Checker and Approver either by full name or initials. The Author and the Checker can't be the same person.

2.9 Units of Measure

The international System of Units (SI Units) shall be used throughout; dual units (SI Units with imperial in parentheses or vice versa) are also permitted. However, with the following exceptions:

- Nominal pipe/fitting/valve sizes in inches and pressure rating in lbs in accordance with ASME pressure classes
- Pressure in bar
- Liquid flow in m^3/h
- Gas flow in Nm^3/h (0°C, 1.01325 bara)

3. SUPPLIER DOCUMENT REQUIREMENTS LIST (SDRL)

COMPANY has indicated the Supplier Document Requirements before placement of the Purchase Order. These requirements are based on the document types required for the scope. It is the Suppliers responsibility to further detail the documentation required to fulfil the scope of work.

COMPANY will provide a Supplier Document Requirement List (SDRL) template in native format filled in with all the information available. Supplier shall complete the SDRL with the detailed titles, planned delivery dates and other required information of the documentation that will be provided. If Supplier deems additional documents are required, required documents are not applicable, document types are combined, multiple documents are required for 1 document type, or other changes, Supplier is expected to indicate this on the SDRL. The SDRL shall always be issued in native format. COMPANY will assign COMPANY document numbers to be used by Supplier.

4. DOCUMENT DELIVERY

The standard way of delivering documents to COMPANY is by e-mail. COMPANY will provide the e-mail address to be used. The size limit of e-mails COMPANY can receive is 20 Mb. When a document exceeds this limit, it can be sent in parts or by file sharing tools like WeTransfer and Dropbox.

COMPANY will store, distribute and review the Supplier documents in PIMS EDMS system. Reviewed documents will be returned to Supplier by e-mail.

Supplier can request access to PIMS in order to upload and download files directly in PIMS. In general, this access will only be granted if the expected number of documents is high. Access can be requested from the assigned Document Controller.

5. DOCUMENT REVIEW

All documents stated in the SDRL shall be subject to review by COMPANY, except documents with Review Class I (For Information). Supplier shall not start fabrication until COMPANY has acknowledged such review (hold point) and possible comments have been implemented.

5.1 Review Codes

The review codes used by COMPANY are:

Review Code	Code Description
Code A	Reviewed, no comments
Code B	Reviewed, comments as provided, revise and Proceed
Code C	Rejected, revise and resubmit
Code D	For Information Only
Code E	For Continuous update, revise and Resubmit

When a document is reviewed with Code C, work may not proceed. Supplier shall revise and resubmit the document for review by COMPANY.

Note that a review code given by COMPANY does not relieve the Supplier from good engineering practice. Suppliers in no way are absolved from responsibilities for their accuracy for the design, construction and performance of the equipment.

5.2 Review Turnaround Time

Documents issued by Supplier shall be returned by COMPANY with a review code within 10 working days.

Documents returned by COMPANY to Supplier with review Code B or C shall be revised and resubmitted for review by Supplier within 10 working days.

6. FINAL HANDOVER

Once all the individual documents have been reviewed and returned with review code A or D by COMPANY, Supplier can assemble the Final Data Books, being:

1. Installation, Operating & Maintenance Manual (IOM)
2. Manufacturing Data Book (MDB)

The Final Data Books shall be in accordance with paragraph 7.0 and 8.0. The requirements as described in latter paragraphs are minimum requirements, which shall be supplemented as necessary to fulfil the requirements and to allow professional operation and use of the subject equipment. In case of doubt Supplier shall contact COMPANY for final advice.

1 Data book shall have 1 PDF file. The PDF file shall be bookmarked reflecting the index of the data book and shall contain bookmarks for all individual documents. Supplier shall strive to deliver the best quality of PDF files while keeping the file size limited. To achieve this PDF files are preferably created from natives (e.g. dwg, xls, doc) instead of being scanned whenever possible.

7. INSTALLATION, OPERATING & MAINTENANCE MANUAL (IOM)

IOM formats shall be compiled according to following format and contents (as far as appropriate for the ordered equipment) and shall be applicable for the complete package including deliveries from sub-suppliers:

Supplier Document Front Sheet	
Contents/index sheet	
Section 1	Introduction - Scope of supply - manufacturer. - Sub-Supplier contact list and scope of supply.
Section 2	Description of complete equipment/package - Including Process/Utility diagrams. - Safety requirements.
Section 3	Installation - Equipment installation, alignment and replacement procedures. - Commissioning procedures and checklists. - Access and lifting.
Section 4	Operation - Operation instructions. - Functional descriptions. - Operation and control procedures. - Instrument set point list. - Valve numbering drawings.
Section 5	Maintenance - Preventative maintenance schedules/details. - Routine maintenance. - Condition monitoring including lube oil analysis/ condemning limits. - Routine test procedures. - Trouble shooting procedures including diagnostic charts.
Section 6	Data sheets (completed by manufacturer) - Mechanical/instrumentation/electrical data sheets. - Instrument list/ index, showing the following data as a minimum: • tag number • description • make / type of device • serial data format (stop bit, band rate etc) including address • engineering units • ranges • alarm/ trip setting - Performance curves
Section 7	Drawings For type of supply list of applicable drawings including, but not limited to: • General arrangement drawings and weights • Process and instrumentation diagrams • Cause and Effect diagrams • Piping/Electrical and Instrumentation/Structural • Parts drawings. - "Certified as-built" drawings.

	- Material lists.
Section 8	Parts data - Equipment/package component details (for re-ordering from original manufacturer, including parts not supplied as spare). - Completed spare parts list, including all sectional/exploded view drawings necessary to identify and install the spare parts.
Section 9	Special tools - Schedule and technical description. - Usage instructions
Section 10	Sub-Supplier data - For all supplied items. - Marked to show specific type supplied. - (Operation and maintenance instructions shall be structured as standard Supplier documentation.)

8. MANUFACTURING DATA BOOK (MDB)

MDB formats shall be compiled according to following format and contents (as far as appropriate for the ordered equipment):

Supplier Document Front Sheet	
Contents/index sheet	
Section 1	General - Summary of sub-ordered equipment/material/services with sub-Supplier details and scope descriptions.
Section 2	Data sheets - Manufacturer's completed data sheets.
Section 3	Specification/code references - Concessions and waivers. - Non-conformance reports.
Section 4	Design Calculations - Latest revision as reviewed by Buyer.
Section 5	Manufacturer's fabrication report - Manufacturer's certificate of compliance (confirmation that the package is designed, fabricated and inspected in accordance with Purchase Order requirements). - Completed quality control plan. - Government related documents. - Inspection release certificates.
Section 6	Procedure - Manufacturing, fabrication, examination and repair procedures. - Welding procedures WPS. - Welder qualification records plus welder list with names, stamp, qualification and WPS. - NDT operator qualifications and certificates. - Performance/string test procedures. - Dimensional control procedure.
Section 7	Material certificates - Certificate index. - Certificates. - Heat treatment reports.
Section 8	Inspection/Test Reports - Material inspection. - Mechanical inspection. - Balancing, dynamic and overspeed tests. - Hydrostatic/leakage test. - Runouts and clearances inspection. - Performance test. Optional tests, such as: • NPSHR test; • complete unit test; • tandem test; • gear test; • helium test; • sound level test; • spare parts test;

	• auxiliary equipment test; • post-test inspection of casing; • full pressure/full load/full speed test; • post-test inspection of the hydraulic coupling fit. - Electrical functional test. - Instrumentation functional test. - Painting/surface preparation. - Lifting and weighing. - Preparation for shipment.
Section 9	<u>Drawings</u> - Index. - Fabrication and design drawings. - Weld and NDE identification drawings. - "Certified as-built" drawings.
Section 10	<u>Other relevant documentation</u>

9. SUPPLIER DOCUMENT TYPES

SUPPLIER DOCUMENT TYPES					
THE DOCUMENT TYPES SHOWN BELOW ARE ALL AVAILABLE DOCUMENT TYPES. THE DOCUMENT TYPES REQUIRED FOR THE SCOPE OF THE PURCHASE ORDER SHALL BE INDICATED ON THE SUPPLIER DOCUMENT REQUIREMENTS LIST (SDRL).		With Bid	Native File Required (F=Final, R=Review)	Include in:
