

Gradient (GRAY) - Investor Snapshot

Date: July 21, 2025

Overview

Gradient (GRAY) is a new DeFi token project aiming to build more efficient markets beyond traditional AMMs. It uses a custom ERC20 contract with automatic tax and liquidity functions and maintains an ETH treasury.

Tokenomics

- Max Supply: 10,000,000 GRAY
- Decimals: 18
- Taxes: On buys/sells (1%+), directed to ETH & liquidity pool
- Liquidity Trigger: 20,000 GRAY auto-swap and inject
- Treasury: Receives ETH from taxed trades

Strengths

- Clean, audited-style code using OpenZeppelin
- Auto liquidity provisioning mechanism
- Professional branding and roadmap
- ETH-based treasury accumulation

Risks

- Centralized owner control at launch
- No active staking/governance features
- Claims of AMM innovation not yet backed by code
- Early-stage, low liquidity compared to leaders

Verdict

Gradient is a technically sound early-stage DeFi token with clean mechanics and an ETH treasury strategy. If their 'efficient market' vision beyond AMMs materializes, it could offer real innovation. Until then, it's a promising but speculative play.
